Abstracts

The teleradiology market is expected to reach USD 14.8 billion by 2026 from USD 7.3 billion in 2021, at a CAGR of 15.3% during the forecast period of 2021 to 2026. Due to the outbreak of coronavirus globally, there is a sudden rise in the demand for teleradiology services. The growth of this market is mainly attributed to the growth of the teleradiology market is driven by the rising geriatric population and the subsequent increase in the prevalence of associated diseases; the increasing number of advanced imaging procedures and a shortage of skilled radiologists; advancements in teleradiology the increasing adoption of cloud-based solutions. However, declining reimbursements and the increasing regulatory burden in the US are factors expected to restrain the market growth. Moreover, the increasing adoption of artificial intelligence and blockchain technology in teleradiology is expected to provide lucrative opportunities for the growth of the teleradiology market in the coming years.

“CT was the largest and fastest-growing Imaging technique market in 2020”

Computed tomography (CT) is used in a wide range of applications, such as cardiology, oncology, neurology, and abdomen and pelvic, and spine and musculoskeletal imaging. Factors such as the growing need for effective and early diagnosis, technological advancements, and digitalization in this field are driving the growth of the teleradiology market for this segment. According to an article published by the University College (July 2020), in the NHS, about 5 million CT scans are performed every year; in the US, more than 80 million CT scans are performed annually. The rising need to prevent

exploratory surgeries and growing improvements in cancer diagnosis & treatment have increased the demand for CT scans over other imaging techniques.

“Hospitals and clinics is the largest end user segment in the teleradiology market in 2020”

Based on end users, the teleradiology market is segmented into hospitals and clinics; diagnostic imaging centers and laboratories; long-term care centers, nursing homes, and assisted living facilities; and other end users. The hospitals and clinics segment accounted for the largest share of in 2020. The large share of this segment can be attributed to the rising number of diagnostic imaging procedures performed in hospitals, the growing inclination of hospitals towards the automation and digitization of patient records, and the growing need to improve the quality of patient care. Moreover, a shortage of radiologists due to the COVID-19 pandemic and the rising adoption of advanced imaging modalities to improve workflow efficiency in hospitals are further expected to support the growth of this end-user segment.

“North America will continue to dominate the teleradiology market in 2026”

The teleradiology market is segmented into five major regions, namely, North America, Europe, Asia Pacific, Latin America, and the Middle East and Africa. In 2019, North America accounted for the largest share. The large share of North America in the global market is attributed to the rising geriatric population, high incidence of chronic diseases, a large number of diagnostic imaging procedures, increasing awareness about the benefits of early diagnosis of diseases, and the rapid adoption of technologically advanced imaging systems in this region. Due to its growing geriatric population segment and environmental conditions have favored the spread of COVID-19 which has severely affected the region and ensured enormous growth in the demand for telehealth and teleradiology. Players in this and adjacent, or even non-related, markets have focused on or collaborated for expanding the services of teleradiology.

The break-down of primary participants is as mentioned below:

By Company Type - Tier 1: 45%, Tier 2: 30%, and Tier 3: 25%

By Designation - C-level: 20%, Director-level: 60%, and Others: 20%

By Region - North America: 35%, Europe: 30%, Asia Pacific: 20%, Latin America: 10%, and the Middle East & Africa: 5%

Research Coverage:

The report analyzes the teleradiology market and aims at estimating the market size and future growth potential of various market segments, based on products and service, imaging technique, end user, and region. The report also provides a competitive analysis of the key players operating in this market, along with their company profiles, product offerings, recent developments, and key market strategies.

Reasons to Buy the Report

This report will enrich established firms as well as new entrants/smaller firms to gauge the pulse of the market, which, in turn, would help them garner a greater share of the market. Firms purchasing the report could use one or a combination of the below-mentioned strategies to strengthen their positions in the market.

This report provides insights on:

Market Penetration: Comprehensive information on the product portfolios of the top players in the teleradiology market. The report analyzes this market by type, indication, end user, and region

Market Development: Comprehensive information on the lucrative emerging markets, by products and services, imaging technique, end user, and region

Market Diversification: Exhaustive information about the product portfolios, growing geographies, recent developments, and investments in the teleradiology market

Competitive Assessment: In-depth assessment of market shares, growth strategies, product offerings, and capabilities of the leading players in the teleradiology market
