Abstracts

The turbocompressors market is projected to reach USD 15.81 billion by 2021, growing at a CAGR of 5.4% from 2016 to 2021. Factors such as the rapid growth of the manufacturing sector in South Asian countries and increasing investments in sectors other than oil & gas in the Middle East are driving market growth.

“Oil & Gas: The largest and fastest growing end-user segment in the turbocompressors market”

The oil & gas sector is the largest end-user of turbocompressors. Turbocompressors are used in almost all the stages of the oil & gas industry, from extraction to refining, transport, and storage. Given the increasing LNG trade between nations, the demand for turbocompressors is expected to increase in the future. To minimize losses, major players have suspended or cancelled exploration and drilling investments. However, the growing demand for chemical and petrochemical derived products, coupled with low oil prices, has ensured the steady growth of the downstream oil & gas industry. The increasing investments in petrochemical industries are a key factor spurring the growth of the turbocompressors market.
