## **Abstracts**

“The water filters market is projected to register a CAGR of 6.3% between 2018 and 2023”

The water filters market is estimated to be USD 10.8 billion in 2018 and is projected to reach USD 14.7 billion by 2023, at a CAGR of 6.3%. The growth in food & beverages, chemicals & petrochemicals, pharmaceuticals, and oil & gas industries is driving the demand for water filters. However, patented products and high raw materials cost are some of the potential restraints for the growth of the water filters market.

“Single & dual phase is the fastest-growing media type segment of the water filters market”

By media type, the single & dual phase segment is projected to register the highest CAGR during the forecast period. There is a growing demand for single & dual phase media due to its multiple uses. The segments’ growth is also driven by the growth in food & beverages, chemicals & petrochemicals, pharmaceuticals, oil & gas industries.

“Asia Pacific expected to be the largest market for water filters”

By region, the Asia Pacific water filters market is projected to register the highest CAGR

between 2018 and 2023. This growth projection is mainly attributed to the growing population, increasing urbanization & modernization, and increasing concerns related to the use and reuse of water and wastewater. China is estimated to be the largest contributor to the Asia Pacific water filters market.

“Food & beverages to be the largest end-use industry segment of the water filters market”

Based on end-use industry, the food & beverages segment is projected to register the highest CAGR between 2018 and 2023. This growth is mainly attributed to the growing population, increasing urbanization, and rising number of working women. Increasing health issues caused due to impure water particles & contaminants act as a major driver for the water filters market. The food & beverage industry uses a huge quantity of water for processing and other procedures.
