“The increasing demand for paints & coatings in various end-use industries to drive the market.”

The white spirit market size is estimated to be USD 6.7 billion in 2019 and projected to reach USD 8.1 billion by 2024, at a CAGR of 4.0%. The market is driven by the growing need for paints & coatings in various end-use industries. However, the increasing regulations on the use of environmentally-friendly products could hamper the market for white spirit.

“The type 3 product segment is projected to register the highest CAGR during the forecast period.”

The type 3 segment is projected to witness a higher growth rate than other types during the forecast period. The demand for type 3 white spirit is driven mainly by the growing demand for low aromatic white spirit from the coating, adhesives, and industrial cleaning chemical manufacturers. The increased consumption of these compounds in the various end-use industries, such as automotive, construction, and chemical is another vital factor leading to the high demand for type 3 white spirit.

“The market in the thinner & solvent segment to account for the largest share during the forecast period.”

White spirit is an essential ingredient in the manufacturing of solvent-based paints & coatings and is used as a thinner. The main purpose of the white spirit as a thinner is to reduce the viscosity of the paint and provide a slower rate of evaporation. Hence, the paints that are thinned with white spirit dry to a smoother surface and form a leveled coat on the surface it is being applied to. The growth of the construction industry is fueling the paints & coatings demand in these regions, which will directly have an impact on the demand for white spirit.

“APAC is projected to be the fastest-growing region during the forecast period.”

APAC accounted for the largest share of the global white spirit market. The developing economies of APAC and Middle East & Africa are witnessing an increase in urbanization, increasing middle-class population, and the growing demand for new houses due to the rising number of nuclear families, which has led to the construction of new residential and commercial buildings, which is expected to increase in the future.
