Abstracts

The research report titled, “Agriculture Robots Market by Offering (Hardware, Software), Deployment (Indoor, Outdoor), Automation Type (Automated, Semi-automated), and End Use (Crop Farming, Livestock, Forestry, Fishery) and Geography—Global Forecasts to 2030”, provides in-depth analysis of agriculture robots market across five major geographies and emphasizes on the current market sizes, market shares, recent developments, and forecasts till 2030.

The global agriculture robots market is expected to reach \$23.9 billion by 2030, at a CAGR of 15.8% from 2023–2030.

The growth of the agriculture robots market is driven by the rising adoption of drones for smart farming, population growth & labor shortages, and increasing government initiatives supporting the agriculture sector. However, the high costs of implementing agricultural robots restrain the growth of this market.

The increasing integration of artificial intelligence into agricultural robots is expected to create growth opportunities for the players operating in the agriculture robots market. However, the lack of technical knowledge among farmers and data privacy concerns poses a major challenge to market growth. Additionally, Robot-as-a-Service (RaaS) and the increasing number of start-ups in the agro-tech industry are key trends in the market.

Based on offering, the market is segmented into hardware, software, and services. The hardware segment is projected to register the highest CAGR during the forecast period. The growth of this segment is driven by the increasing adoption of livestock management robots, rapid automation of agricultural processes, growing population, and shortage of labor.

Based on deployment, the market is segmented into outdoor and indoor. The outdoor segment is projected to register the highest CAGR during the forecast period. The growth of this segment is driven by the growing population, shortage of labor, and increasing need to monitor weather and climatic changes for outdoor farming.

Based on automation type, the market is segmented into automated and semi-automated. The automated segment is projected to register the highest CAGR during the forecast period. The growth of this segment is driven by the rapid adoption of advanced technology, shortage of labor, and increasing demand for automated robots in crop farming.

Based on end use, the market is segmented into crop farming, livestock, forestry, and fishery. The livestock segment is projected to register the highest CAGR during the forecast period. The growth of this segment is driven by the increasing need for livestock monitoring and disease detection, labor shortage, and the rising cattle population with increasing dairy farms.

Geographic Review:

Based on geography, the market is broadly segmented into North America, Europe, Asia-Pacific, Latin America, and the Middle East and Africa region. Asia-Pacific is projected to register the highest CAGR during the forecast period. The growth of this market is driven by the increasing adoption of smart devices for agriculture, rising demand for enhanced food quality, growing adoption of precision farming & government initiatives, and the growing number of start-ups in the region.
