### Market Overview

Global High Throughput Screening Market is expected to reach USD 21,911.2 million by 2022 supported by a CAGR of 8.0% during the forecast period of 2017 to 2022. The global high throughput screening market is mainly driven by the increasing adoption of innovative approaches in pharmaceutical and biotechnology companies, growing investment by private equity firms and venture capitalists, rising government funding for various R&D activities, increasing healthcare spending, and technological advancements. Further, growing research in toxicology and stem cell research provide significant opportunities in this market. However, high cost for HTS, intricacy in the field of assay development, and government regulations for drug development obstructs the growth of this market to some extent.

### Market Segmentation

The global high throughput screening market is mainly segmented by product & service (Consumables & Reagents, Instruments, Software & Services), by technology (Cell based Assay, Ultra High Throughput Screening, Label Free Technology, Lab On A Chip), by application (Stem Cell Research, Toxicology Assessment, Primary Screening, Target Identification), by end user (Pharmaceuticals and Biotechnology Industry, Academics and Research Institutes, Contract Research Organizations, and others), and by geography (North America, Europe, Asia-Pacific, Latin America, and Middle East & Africa).

### Geographic Overview

Geographically, the global high throughput screening market is segmented into five major regions, namely North America, Europe, Asia-Pacific, Latin America, and Middle East & Africa. These regions are further analysed at a country level with the detailed qualitative and quantitative analysis. North America accounted for the major share in the global high throughput screening market in 2016, followed by Asia-Pacific, and Europe. The major share of the North American region is mainly attributed to the growing elderly population and increased Research and development expenditure in biopharmaceuticals and biotechnology industries. On the other hand, Asia-Pacific region is projected to grow at a fastest CAGR during the forecast period, due to increasing population, rising prevalence of various diseases, and growing R&D funding for the drug discovery and development.
