Abstracts

The factors such as increasing need for filmless environment, increasing awareness and demand of quality healthcare, rising geriatric imaging volumes, increasing adoption of medical imaging equipment, growing health IT and EHR adoption are driving the growth of VNA and PACS market in India.

Country outlook

The healthcare industry in India has made rapid progress in the last decade, but significantly lags behind other nations in terms of availability and quality of equitable medical care and services for its citizens. This in turn presents an enormous opportunity given the large population, growing economic prosperity, and the disease burden. Major issues such as lack of availability of adequate infrastructure, trained human resources, geographic spread, rapidly changing disease burden, and high/often catastrophic out of pocket expenditures are the key challenges that the government is keen to address. Despite of these challenges, the country is continuously focusing on improving the quality of healthcare by adopting various advanced technologies to manage the medical images generated through various diagnosis procedures. Moreover, penetration of Artificial Intelligence (AI) in the field of medical imaging and growing acceptance of cloud-based deployments offer significant growth opportunities for the market players during the forecast period.

Key Players

The report includes competitive landscape based on extensive assessment of the key strategic developments adopted by leading market participants in the industry over the past 3 years (2015-2018).
