## Abstracts

The main service areas in the financial services industry cover mainly financial transactions and financial management. It requires strict security for the transactions conducted by both service providers and their clients. Hence, there is an evident demand for stricter identification verification. In recent years, more and more financial services providers have incorporated biometric authentication technologies into their financial services, including vein recognition, fingerprint recognition, iris recognition, and facial recognition. Particularly, there is a growing trend in the number of applications using facial recognition. This report probes into several cases of facial recognition technology in the financial services industry, and examines future prospects of the industry.

## Contents

### **1. INTRODUCTION TO FACIAL RECOGNITION TECHNOLOGY**

4.2.1 Vein Authentication is Mainly Used in ATM Machines. Iris and Facial Authentication are Joining the Game in Recent Years.

4.2.2 Smartphones have Become Major Means in Financial Services Development; Vein Authentication and Facial Authentication Have Great Potential

4.2.2.1 Vein Authentication Technology has Overcome Technical Difficulties in Downsizing the Scanner

4.2.2.2 Iris Authentication Boasts High Accuracy Rate but Faces Cost and Practical

## Problems

4.2.2.3 Attribute Analysis Helps Establish a Comprehensive Authentication

## Mechanism

4.2.2.4 Low Practicality Limits Fingerprint and Voiceprint Authentication Development

## **5. CONCLUSION**

5.1 Attribute Analysis Has Great Potential Despite of Low Presence

5.2 Applications and Empirical Results in China Merit Further Observation
