Abstracts

Technology is shaping the future of mobility and with a focus on "human-centered design," mobile services are transitioning from "People to Service" to "Service to Person." This transformation in mobility is reshaping human lifestyles. The growth of SAE Level 3 cars allowing drivers to be hands off are expected to see significant growth by 2025; consequently, it will further drive the development of car cockpit into a "third living space," characterized by complex functions and an emphasis on multi-module information displays. This report provides an overview of the global EV market and the advancements in auto-driving technology; explores the development of car cockpits, including in-car displays; examines the influence of ICT technology on the automotive industry from the perspectives of both traditional and new carmakers.
