Abstracts

Collaborative robots are designed to interact closely with staff in a co-working environment. Due to diverse work requirements, designing automated work tasks carried out by robots has become more and more popular. With the human-machine interface advantage, collaborative robots have become an option for many companies when they evaluate automation solutions in recent years. This report looks into several key fields and sectors in which most collaborative robot patents are filed, examines key collaborative patent distribution by technology, and explores their key applications.
