Abstracts

The rise of the Internet in 1995 raised the curtain on information digitization. Today, digitization promises far-reaching applications. From government-driven digital economy, new financial service models such as FinTech and InsurTech, research on virtual currency as commodity or CBDE (Central Banking Digital Currency), to the emergence of new service providers such as e-commerce and social media, all have one thing in common, that is, identity recognition. In other words, identity recognition has existed for hundreds of years, but identity recognition methods have evolved as technology developed to where we are today. This report provides an overview of component and technological development of identity recognition technology and examines industry trends and existing applications.

Contents

1. INTRODUCTION

2. WHAT IS IDENTITY RECOGNITION

3. DEVELOPMENT OF IDENTITY RECOGNITION TECHNOLOGY

3.1 Past

3.2 Present

4. FUTURE TRENDS IN IDENTITY RECOGNITION

4.1 Identity Recognition Technology
