OVERVIEW:

The combination of Smart Home technologies with Smart Appliances is transforming consumer lifestyles. Tasks that were purely a drudgery in the past are now easy, and in some cases, actually engaging and fun as appliances also act as information and entertainment conduits by way of connected home solutions. In addition, major home appliances are increasingly becoming much easier to maintain and replace as the cloud-based “as a service” model transforms products into easy to use and informative services. Meanwhile Virtual Personal Assistants (VPA) are taking the consumer market by storm as both a universal user interface as well as Artificial Intelligence (AI) overlay with virtually any application.

This research assesses the Connected Home and Smart Appliance marketplace, including major industry players, and solutions. The role of IoT and supporting technologies is evaluated with analysis of current market inhibitors and solutions. The report provides market forecasts for major market segments, sub-segments, and regional expectations for the period 2017 through 2022. The report also includes detailed forecasts for real-time IoT analytics in the Connected Home market 2017 – 2022. This research also evaluates the technologies, solutions, companies and market for Virtual Personal Assistants (VPA) and Smart Advisors including forecasts to 2025.
