Enterprise and government spending for cybersecurity products, managed services, and professional services will be substantial over the course of the next few years. According to Cybersecurity Ventures, cumulative global spending on cybersecurity products and services will exceed $1 trillion over the next five years. Furthermore, the firm predicts $6 trillion in cybercrime damages annually by 2021. Accordingly, Mind Commerce sees damage control and mitigation solutions as a critical portion of the cybersecurity market.

At the macro level, spending is driven by the realization of increasingly more voluminous and sophisticated global threats to digital infrastructure. At the business level, company reliance upon the Internet, open interfaces and communication between customers and other companies necessitates robust cybersecurity solutions. In addition, new technologies and solutions such as the Internet of Things (IoT) will require new approaches to cybersecurity and hence innovative solutions as evaluated in the Mind Commerce report Artificial Intelligence in IoT Security and Fraud Prevention 2017 – 2022.

Global Cybersecurity Market Outlook and Forecasts 2017 – 2022 examines cybersecurity technology and solutions. The report assesses risks and security operation issues relative to current and anticipated cybersecurity technologies.
