Overview:

The Industrial Internet of Things (IIoT) is poised to significantly improve reliability, production, and customer satisfaction. In the intermediate term, process improvement benefits will extend beyond cost savings to identification of entirely new business models and service offerings as traditional products transform to services. Long-term value from IIoT will be derived from transforming data (ranging from industrial processes to business CRM support) into useful insights.

Initially focusing on improving existing processes and augmented current infrastructure, IIoT will evolve to encompass next generation methods and procedures such as 'teleoperation' (operation of a machine at a distance), tele-robotics, and other areas that rely upon interface and control of real objects by virtual objects. Mind Commerce sees IIoT as one of the leading areas for overall IoT adoption due to many factors including the incidence of many high value use case scenarios, which is an issue for many consumer oriented applications and services.

This research evaluates the technologies, companies, solutions, and market outlook for IIoT.
