Integrated Workplace Management Systems (IWMS) are designed to optimize the usage of corporate physical assets such as real estate, buildings, facilities and infrastructure. Optimization includes everything from resource requirements to workflow and personnel management.

IWMS solutions represent a combination of five separate modules (1) Property Management, (2) Facility and Space Management, (3) Maintenance Management, (4) Sustainability and Energy Management, and (5) Technology Management. Each software module addresses specific functions powered by Internet of Things (IoT) technologies, as well as Artificial Intelligence (AI), 3D Visualization, and Data Analytics. IWMS solutions as a whole typically include software as well as related services such as network and system integration, professional services, predictive analysis, and more.

With IWMS solutions, enterprise organizations are able to optimize asset utilization, energy consumption, technology deployment, building, and infrastructure efficiency, and overall workplace productivity to gain substantial savings in CAPEX and OPEX. Integration of IoT and AI is accelerating the transformation from software-driven to service-centered automation with the added benefit of generating positive returns on assets for enterprises. Deployment of IWMS solutions is anticipated to provide the following benefits for the typical enterprise:

Improve energy consumption by 11.5%

Improve facility usage efficiency by 39.3%

Reduce facility maintenance costs by 15.2%

Improve workspace management by up to 43.8%

Reduce enterprise asset lifecycle costs by up to 33.5%

Mind Commerce sees the confluence of AI and IoT (AIoT) having a particularly large

positive impact on the IWMS solutions market. AIoT will make IWMS solutions more effective and efficient as well as ease the transition towards a less human-intensive workforce.

The smart workplace will leverage AIoT for both autonomous decision-making as well as collaborative human-machine oriented cognitive computing approaches. This will manifest in an AIoT embedded IWMS solution market that will reach \$3.5 billion globally by 2026.
