Abstracts

NFV plays the role of connecting and managing heterogeneous IoT elements in a more scalable, flexible, and secure manner. This need is especially the case for enterprise IoT as a typical large enterprise IoT architecture will consist of potentially hundreds of data centers, thousands of IoT gateways, and millions of IoT devices. Software defined networking (SDN) and virtualization are poised to transform network and service architecture thanks to improvements in technologies that offer improved performance and lower costs.

This research evaluates the market need and opportunities for NFV in IoT. This research also provides an in-depth assessment of the SDN market including business models, operator and vendor strategies and a quantitative assessment of the industry. All purchases of Mind Commerce reports includes time with an expert analyst who will help you link key findings in the report to the business issues you're addressing. This needs to be used within three months of purchasing the report.

Target Audience:
