Abstracts

Two-pieces cans are developed in replaced of three-piece cans that cause lead pollution. The two-piece can is a packaging container with the bottom end and the body shaped from one sheet of metal by deep drawing, with a second end seamed to the can to close it and form a complete package for sale. As the whole can is composed of two pieces, it is known as the two-piece can.

Compared with the three-piece can, the two-piece can has the following advantages: (1) The can body has no side seam, and there's no seam between the body and the bottom end, so the can is tightly sealed with less consumption of raw materials; (2) The can body can be fully decorated and printed; (3) The can making process is easy and efficient. However, it also has some disadvantages. For example, it requires excellent performance of the can-making materials and a high investment in equipment. Besides, can-making technologies, equipment and dies must be excellent as well.

This report contains market size and forecasts of 2-Piece Can in global, including the following market information:
