## Abstracts

Acetabular cups consist of a titanium or cobalt-chromium alloy shell with an ultra-high molecular weight polyethylene (UHMWPE) liner and require extreme precision. Among the 3D printed acetabular cup products that have achieved commercial transformation so far, the manufacturing techniques are two powder bed metal 3D printing techniques - electron beam melting (EBM) and selective laser melting (SLM). Among them, the application of electron beam melting technology in the field of acetabular cup 3D printing is earlier, and it has also occupied more 'seats' in the production of commercialized 3D printed acetabular cup products; constituency laser melting 3D printing technology is also continuously optimization to improve its production efficiency, reduce manufacturing costs, and meet the needs of mass production.
