Abstracts

Atrial fibrillation (AF) is the most common sustained cardiac arrhythmia, and its incidence and prevalence are increasing year by year. Atrial fibrillation mainly increases the risk of stroke by 2 to 7 times, increases the risk of death by 2 times, and seriously endangers the health of the population. Catheter ablation is currently the most effective method for the treatment of atrial fibrillation. Several randomized controlled trials have demonstrated that catheter ablation is more effective than antiarrhythmic drug therapy for maintaining sinus rhythm in both paroxysmal and persistent atrial fibrillation. 3D EP The Navigation System is one of the core devices for catheter ablation surgery.
