Abstracts

A construction 3D printer is a machine that can build houses by depositing a material (concrete for example) layer by layer. Concrete 3D printing – a.k.a. “Construction 4.0” – is a similar 3D printing technology to the one that FFF 3D printers use. Paste-type material, in this case, concrete or earth materials, is pushed through a nozzle in layers to print buildings in 3D. Concrete 3D printing in the construction industry helps save time, effort, and material compared to traditional construction methods. It’s important to note, though, that 3D printers are not yet capable of creating a fully functional house?only built the frame and walls of the house.
