Abstracts

3D ultrasound works by creating a dataset of a large number of 2D images, or planes. Meanwhile, 4D ultrasound, or “real-time 3D ultrasound,” rests on the concept that as computers grow ever more powerful, we can now use ultrasound equipment to acquire and display 3D datasets in real time, as a patient is being scanned. 4D ultrasound technology shows more than just basic medical data – it also reveals crucial information about a fetus.
