Abstracts

A 4k curved monitor is a display that has the same resolution as a regular 4K UHD TV, but it's not quite the same. The main difference between these two types of displays is their size and shape. While both have 3840 x 2160 pixels (8 million pixels), they differ in terms of screen size and aspect ratio. For example, while most TVs are flat screens with 16:9 or 16:10 aspect ratios, monitors usually come in different shapes such as square or rectangular ones with 21:9 aspect ratios – which means that they can be wider than usual without being too tall to fit on your desk.

This report contains market size and forecasts of 4K Curved Monitors in global, including the following market information:
