## Abstracts

A 5-axis CNC Machine (also known as 5-axis Machining Center) is a precision CNC machine tool that uses a wide range of cutting tools to remove materials from a workpiece. It does so along five different directional axes, either by positioning the piece or by simultaneously cutting it along these axes, until the desired shape is achieved.

For a more specific representation, an example of a 1-axis machine would be a radial drilling machine, with up and down motion (Z axis). Following that same logic, a 3-axis CNC Machine can move up and down (Z axis), right to left (X axis), as well as forwards and backwards (Y axis).

A 5-axis CNC machine has two extra rotary axes which opens the door to an infinite number of machining possibilities. The types of rotary axis include rotary axes A, B and C which rotates around the X-axis, Y-axis, and Z-axis respectively. While these are three extra axes and not two, they're still considered 5 axes in total. The combination of the additional axes is machine dependent and can come in any combinations of AB, AC or BC.
