Anterior cruciate ligament reconstruction is a surgery which replaces a torn ACL. ACL is made of hard fibrous materials, which are positioned in the knee joint. Anterior cruciate ligament is a ligament which passes over the middle of the knee & joints thighbone to shinbone, which soothes the knee joint. ACL damages occur owing to several sports which include sudden halts & changes in direction like basketball, football, soccer, etc. In surgeries, the torn ligament is changed with a tendon from another part of the knee. This is a casualty process & is performed through small cuts around the knee joint.
