Abstracts

Acoustic flooring mat or under screed mat is a material that is laid over a plywood, concrete, or subfloor to cushion the flooring and minimize the effects of impact noise. An acoustic mat reduces the impact noise levels up to 33 decibels. These mats aids in reducing the impact noise such as footsteps hence are widely preferred in commercial spaces. Moreover, the presence of stringent noise regulations in countries such as Germany and Italy among other shall further add to the demand for the production during the assessment period.
