Abstracts

Acrylic adhesives are adhesives manufactured using methacrylate and acrylate monomers as a major feedstock. Polymer mixtures are dissolved in methacrylate or acrylate monomer and the adhesive is produced as two different components. One component contains oxidizing agents mainly peroxide compounds such as benzoyl peroxide and the other component contains metal salts or amines as reducing agent. The components are mixed before application on surface or each component can be applied to separate surfaces to be glued. Upon mixing, the components react and trigger polymerization of methacrylate monomer. Acrylic adhesives carry characteristic traits such as high performance and ability to be used across diverse end-use industries, which includes construction, packaging, and pharmaceutical.
