Abstracts

The sensor that converts non electric energy into electric energy, only converts energy itself, and does not convert energy signal is called active sensor. Also known as energy conversion sensor or transducer. It is often matched with voltage measurement circuits and amplifiers, such as piezoelectric, thermoelectric, magnetoelectric, etc., corresponding to passive sensors. This is classified according to the viewpoint of energy. Active device refers to the device that needs external energy source when working. The device has an output and is a function of the input signal.
