## Abstracts

AIS is a chronic condition characterized by the sudden loss of blood supply to a part of the brain, thus causing subsequent loss of neurological function. AIS is caused by thrombotic or embolic obstruction of the cerebral artery and is more common than hemorrhagic stroke. The global AIS therapeutics market is expected to register a low single digit market growth during the forecast period. The marginal growth rate is attributed to the lack of approved drugs in this area, the presence of alternative therapies, extensive use of generics, and unmet needs for anticoagulant reversal agents.
