Additive Manufacturing (AM) , also known as 3D printing, combines computer-aided design, material processing and molding techniques, and is based on digital model files by means of software and numerical control system, special metal material, nonmetal material and medical biological material are piled up layer by layer according to extrusion, sintering, melting, light curing, spraying, and so on. It is a 'bottom-up' manufacturing process that accumulates material from scratch, as opposed to the traditional process of removing, cutting, and assembling raw materials. This makes it possible to manufacture complex structural parts which were restricted by traditional manufacturing methods.
