## Abstracts

Adhesives for Automotive Automated Driving are used for the bonding of components in autonomous driving or advanced assisted driving systems. Due to the increasing integration of automotive electronics, the number of fine-pitch matrix column devices is increasing, and the long-term driving of the car itself exists. Continuous vibration and the need to face severe high and low temperature effects make the chips in these sensing devices more and more likely to fail. Adhesives for automotive autonomous driving can improve the reliability of chips.
