Abstracts

Advanced driver assistance system (ADAS) is an advance safety system which aids the driver of the vehicle while driving. It includes various function such as lane keep assist, adaptive cruise control, blind spot detection, emergency braking, and other active safety systems. Advanced driver assistance system testing equipment studies and analyses the dynamic behaviour of the vehicle advance driver assist system, as it consists of numerous electromechanical and electronic components such as RADAR, LiDAR, electronic control unit (ECU), image sensor, ultrasonic sensor, which check, test, and examine the function and condition of operation of the advance driver assistance system incorporated in the automotive.

Surge in technological improvements and innovation in the field of advance active safety system for automotive is a major factor that is anticipated to boost the advanced driver assistance system testing equipment market during the forecast period. Rising automation in vehicle and introduction of autonomous vehicles are other factors driving the advanced driver assistance system testing equipment market. This expansion is primarily due to large number of testing of the advance active system such as ADAS and its operation. ADAS, which is reliable and preordained for safety of vehicle and vehicle user, is likely to malfunction as it comprises electronic components which require regular maintenance and testing. This, in turn, is likely to propel the advanced driver assistance system testing equipment market during the forecast period. However, the higher cost of the testing equipment and regular maintenance of testing equipment are expected to restraint the advanced driver assistance system testing equipment market during the forecast period.
