Abstracts

The factors that drive the Medical Stopcock market include high demand for valves in the healthcare sector, development in research & development activities to design their products in accordance with changing requirements in various industries, large numbers of tests that take place in ITU, and high dependency units & theatres. Moreover, development in healthcare infrastructure and growth of valves due to an increase in demand in the healthcare sector to control the flow of blood further boost the market growth. However, lack of skilled professionals and occurrence of accidents while using three-way stopcock such as leakage of drugs restrict the market growth. Increase in clinical trials and rise in the demand for three-way stopcock are expected to provide a number of opportunities for pharmaceutical industries, thus fueling the market growth in the near future.

This report contains market size and forecasts of Advanced Medical Stopcock in global, including the following market information:
