Abstracts

Considering the physical and financial limitations around building additional roads, cities must use new strategies and technologies to improve traffic conditions. Advanced traffic management systems (ATMSs) such as adaptive traffic control (ATC) are enabling greater efficiencies in the traffic management ecosystem and can help integrate the expected growth in vehicle populations without overwhelming existing infrastructure. ATMSs are also enabling the development of smart intersections, which are emerging as one of the most important data-driven backbones needed for solving core city challenges.
