Abstracts

Aerospace tubing is used in the aviation pipeline system of the aircraft. It is composed of pipeline subsystems (mainly including catheters and pipeline parts) in all systems of the aircraft, and is the 'vessel' and 'trachea' of the aircraft. The high degree of overlap between the aviation pipeline system and fuel, hydraulic and other systems in the components such as conduits and piping parts directly determines the 'ubiquity' of the aviation pipeline system in the aircraft. Whether it is the nose, fuselage, tail or wing, you can see the pipeline system passing through it
