Air purifiers improve the indoor climate of a room and protect the health of the people in urban environments suffering from headaches, cardiovascular diseases, and respiratory ailments. Increased allergies among people, rise in asthmatic patients, and an increasing number of tobacco smokers are driving demand for air purifiers. Air purifiers reduce the allergies among sensitive people by removing dust, pet dander, pollen, mold spores and dust mite feces. Air purifiers also remove smoke particles and Volatile Organic Compounds (VOC's) which pose a risk to health. Moreover, efficient air purifiers have the capacity to capture some bacteria, virus, and DNA damaging particles.
