Aircraft Exhaust systems are a vital part of the aircraft propulsion mechanism. The exhaust system assembly in aircrafts is usually constituted with exhaust mufflers, exhaust stacks, tailpipes, risers, wyers and turbo exhaust transitions. An aircraft exhaust system is a multifaceted system unlike Others exhaust systems. Aircraft exhaust systems are designed to take care of the engine NHS (noise, vibration and harshness) and prevent melting by handling internal and external temperature variances. The main purpose of an exhaust system in an aircraft is to take the heat and gases away from the engine, which can cause a fire onboard and prevent leakage of poisonous gases into the cockpit.
