Fuel flowmeters and pressure sensors are installed in aircraft engines to analyze fuel flowrates and pressure during engine operations. Fuel flowmeters and pressure sensors are designed based on engine configuration and specifications. All aircraft consume aviation fuel to power their respective engines for the generation of adequate thrust. Aircraft incorporate complex yet essential mechanisms and fuel systems to ensure adequate and efficient use of fuel. A fuel system comprises storage tanks, pumps, metering units, monitoring devices, valves, and fuel lines, which are designed and produced in complete adherence to the guidelines set by regulatory agencies and aviation stakeholders.
