## Abstracts

Airless packing is a type of packing and dispensing system that uses a difference in environmental pressure to create a vacuum evacuate a product material from a reservoir. Airless packing doesn't require a propellant unlike traditional packing as it is developed in such a way to maintain the natural pressure equilibrium based on differential between environmental, external pressure and pressure produced due to lack of air in the product reservoir. The airless packing market is deemed to grow in coming future due to emerging need of better packing solution.

This report contains market size and forecasts of Airless Packing in global, including the following market information:
