Abstracts

Alkyltrichlorosilanes are a class of organosilicon chemicals whose structures exhibit an alkyl group substituted for the last hydrogen atom on trichlorosilanes and are mainly used in surface science and nanotechnology to form self-assembled monolayers. For example, octadecyltrichlorosilane is used in the semiconductor industry to form self-assembled monolayer films on silicon dioxide substrates. It is flammable, reacts with water, and is also sensitive to air. It is corrosive and can severely damage mucous membranes.
