Abstracts

Aluminum nitride (AlN) is the only technical ceramic material that features an extremely interesting combination of very high thermal conductivity and excellent electrical insulation properties.

Aluminum Nitride (AlN), a covalently-bonded ceramic, is synthesized from the abundant elements aluminum and nitrogen. It does not occur naturally.

AlN is stable in inert atmospheres at temperatures over 2000°C. It exhibits high thermal conductivity but is, uniquely, a strong dielectric. This unusual combination of properties makes AlN a critical advanced material for many future applications in optics, lighting, electronics and renewable energy.

About the statistic units "Piece", it means a piece of AlN ceramic substrates, like the standard size 5.5*7.5 inch, 4.5*4.5 inch, 2*2 inch; 3*3 inch etc.

This report contains market size and forecasts of AlN Ceramic Substrates in South Korea, including the following market information:
