Abstracts

Co-fired ceramic devices are monolithic, ceramic microelectronic devices where the entire ceramic support structure and any conductive, resistive, and dielectric materials are fired in a kiln at the same time. Typical devices include capacitors, inductors, resistors, transformers, and hybrid circuits. The technology is also used for a multi-layer packaging for the electronics industry, such as military electronics, MEMS, microprocessor and RF applications. For Alumina Multilayered Ceramic Substrates and Packages, due to its multilayered structure, circuit designs can be delivered flexibly through layers and complex structures, e.g. cavity structures, are available.
