Abstracts

Anaerobic connectors provide high performance for singlemode and multimode connections in a quick and easy field termination solution. Anaerobic curing technology enables fiber optic networks to be installed efficiently with minimal tooling cost. The process begins with the Loctite anaerobic adhesive injected into the empty anaerobic connector, while the end face and bare fiber are dipped into the Loctite primer, which seals oxygen into the base adhesive. Once the adhesive is cured, the fibers protruding from the connector are scribed and polished to completion. Anaerobic connectors are considered ideal for factory-assembled applications or field-installed restorations that require a wide temperature range and stringent performance standards. Anaerobic connectors are fast, easy and reliable for installing ST, SC, FC and LC connectors.
