## Abstracts

Anesthesia is a medical term that means insensitivity to pain. Anesthesia is widely used during surgical procedures to bring unconsciousness to patients. Anesthesia vaporizers are devices that convert liquid inhalation agents into vapors. This vapor and oxygen are collectively delivered to the patient via inhalation route, primarily during pre-surgical procedures. An anesthesia delivery system typically consists of a machine that contains a breathing circuit. The necessity of these devices depends on the type of surgery performed. The concentration of dose differs in every case.
