## Abstracts

In PCI surgery, an angiographic guide wire is an important surgical instrument used to introduce an angiographic catheter into the blood vessel and stay at the designated position. There are two types of commonly used angiography guide wires: traditional Coil spring angiography guide wire and hydrophilic coated guide wire. The traditional Coil spring angiography guide wire adopts the form of a coil spring wrapped around the core wire, which has high hardness, good support, and good safety during surgery; however, its ability to traverse severe tortuous blood vessels is poor.
