Abstracts

As an important component of animal immune defense system, animal-derived AMPs are immune defensive active ingredients induced by external conditions in response to the pathogenic effects of exogenous pathogens. As an important effector of the natural immune system, animal-derived AMPs not only perform broad-spectrum antibacterial functions, but also play a variety of immunomodulative functions in vivo, which are also known as host defense peptides. According to their species origin, animal AMPs can be classified into invertebrate and vertebrate AMPs.
