Abstracts

Animal blood is one of the main by-products of animal slaughtering and processing. It has rich protein content and high nutritional value. Plasma protein, as an important protein material, can be used for animal feed and food processing. Studies have shown that plasma proteins are enzymatically treated to obtain hydrolysates consisting of small peptides and amino acids, which are more easily digested and absorbed by the body. At the same time, they show antioxidant properties, inhibition of angiotensin converting enzyme activity, attenuation, and other functional properties and can be used as potential nutrients. Supplements, food additives, and nutraceuticals.
