Abstracts

Animals, fish, and birds proffer organic fertilizers that help the plants to grow. Animal-based organic fertilizers also contain nitrogen, phosphorous, and potassium that act as the primary nutrient for the growth of plants. Supplementing the soil nutrients with animal-based organic fertilizers such as manure, bat or seabird guano, blood meal, bone meal, and fish products makes the soil suitable for the growth of fruits, vegetables, and other crops. Animal manures provide a lot of organic matter to the soil but contain a low nutrient value. However, chicken manure has high nitrogen content. Bat or seabird guano is made from the poop of bats and seabirds. They are available in pellets and powdered form, and it contains 10 to 15 percent of nitrogen content. Blood meal refers to the powdered blood of slaughtered animals. It contains about 14 percent of nitrogen content and many micronutrients. Nitrogen loving plants like lettuce prefer blood meal as a source of organic fertilizer.
