Abstracts

Anisotropic Conductive Paste (ACP) is a liquid material consisting of electroconductive particles uniformly dispersed within a highly-insulating adhesive component. A functional material, ACP produces an anisotropic conductive film through application and drying in the screen-printing process. It is capable of achieving all three of the following actions at a physical junction through a heat press process for several ten seconds: (1) forming an electric connection between electronic components; (2) retaining insulation between adjacent electrodes; and (3) bonding and fixing
