Abstracts

Anodized Aluminum cookware is fairly inexpensive in comparison to cookware made from other materials. Aluminum is lightweight but fairly strong. It is a good conductor of heat and does not easily distort when exposed to high temperatures. Aluminum works well for saut?ing and frying foods because of its heat responsiveness. The drawback of aluminum is that it reacts to acidic and alkaline foods, causing it to corrode and affect the taste of the food being cook. Aluminum is generally used as a core heat conductor, or coated with stainless steel or an anodized coating to protect the food.

This report contains market size and forecasts of Anodized Aluminum Cookware in global, including the following market information:

Global Anodized Aluminum Cookware Market Revenue, 2017-2022, 2023-2028, (\$ millions)

Global Anodized Aluminum Cookware Market Sales, 2017-2022, 2023-2028, (K Units)
