Abstracts

GPS anti-jamming protects GPS receivers from interference and intentional jamming. By the time the GPS signal reaches the earth's surface is weak and is susceptible to being overcome by higher power radio frequency (RF) energy. Even a small jammer of about 10 Watts power can disrupt an unprotected C/A code receiver for about 30 kilometres (line of sight). GPS anti-jamming uses power minimization to reduce the effect of interference and jamming so that the GPS receiver can continue to operate correctly.
